Profile

AI & Data Science student skilled in Python, SQL, Machine Learning, NLP, and LLM-based applications. Experienced in building AI systems using Generative AI, prompt engineering, and agentic workflows. Interested in solving real-world problems using NLP, retrieval systems, and intelligent agents.

Education

B. Tech Artificial Intelligence and Data Science SNS College of Engineering | CGPA – 8.2 2023- 2027

HSC –RR International School | Score: 79% 2022 - 2023

SSLC – RR International School | Score: 87% 2020 – 2021

Technical Skills

Programming Languages - Python, SQL, Flutter, HTML, CSS(Basics)

Libraries/Tools - Pandas, NumPy, Streamlit, Tkinter, n8n

AI & Emerging Technologies - GenAI, Agentic AI, Prompt Engineering, Machine Learning, NLP, LLMs, Gemini API, LangChain

Database - MySQL

Certifications

- Databricks – GenAI Fundamentals
- Analytics Vidhya - LangChain tutorial, HuggingFace basics
- AWS Academy – ML Foundations
- Infosys – Introduction to DS, NLP
- ByteXL - Python, Basics DSA

Internships

Kevell Corp | Madurai – Developed Mobile applications using Flutter.

Ascentz Technologies | Coimbatore – Focused on Machine Learning concepts and applications

Skypark iTech | Coimbatore - Worked as a Web Developer

Projects

1. HireFusion – AI Resume Screening

Built an NLP-based resume screening system using text preprocessing and similarity matching to rank candidates.

Enhanced with semantic analysis concepts for better matching of job descriptions and resumes.

2. Spam Email Detection – ML model
Developed a machine learning model for email classification using NLP techniques such as tokenization and feature extraction. Evaluated model performance using accuracy and confusion matrix.
3. Speech Therapy - Application to treat Articulation Issues
Designed and developed a Speech Therapy App providing personalized exercises, real- time feedback, and progress tracking. Aimed at making speech therapy more engaging, effective, and widely available.
4. Blood Bank - Application to connect blood donors and patients
Built a mobile app for blood donor search and emergency requests using Flutter.
5. Enunciating Dictionary – Application to know the meanings
6. Built an offline app using Tkinter and JSON for word meanings and pronunciation
